Part	Clause	Comment	Proposed amendment	MPI Response
		Only working out the ppm was challenging and decided just to follow the manufactures guidelines of 2.8gm of cure #1 and 2.5gm of cure #2 per kilo of meat		Included a section in the document linking to a worked example of how to calculate nitrite/nitrate addition rates. Alternatively manufacturers can contact ingredient suppliers for information on addition rates. This information is also commonly supplied with cure premixes.
