

Ref: CTO 2014 136 [G]

Dairy: Composite Products Zoo Cert

CTO direction to biosecurity inspectors for the clearance of composite products containing more than 5% dairy content from EU and Switzerland.

This CTO direction replaces CTO directions 2014 044 and 2014 071.

Pursuant to section 27(1)(d)(iii) of the Biosecurity Act 1993 I, Vicki Melville, Manager Animal Imports, Ministry for Primary Industries (under delegated authority), give the following directions for non-shelf stable composite products containing more than 5% dairy to be given clearance in accordance with the following measures, different from those in the applicable import health standard for Milk and Milk Products for Human Consumption from the European Union and Switzerland, DAIEDIIC.EEC:

Part D, Zoosanitary Certificate not required in cases where the assessment has been made that a permit can be issued.

The manufacturer's declaration contains the information verifying that the dairy component of the composite product has been pasteurized, thus confirming that the dairy component of the composite product is not a risk item.

The reason for directing clearance is that the biosecurity risks associated with this CTO direction have been assessed and are managed effectively.

This direction takes effect from the date of signing and continues in effect until amended or revoked.
