

Farmed Mammal Supplier Declaration – Petfood

Effective from July 2022

This declaration is a way of meeting requirements under s81A of the Animal Products Act 1999 for the purpose of compliance with clause F1.6 of the Animal Products Notice: Production, Supply and Processing.

Supplier	Suppliers Name..... Trading Name.....			
	Farm ID Phone			
	Physical Address See Note 1			
Stock	Species or Type	Tally	Age & Sex	Unique Identifier (mark, brand, tag) See Note 2

- 1 Farmed Mammal History** (see Note 3) Yes No
- 1.1 Are any of these animals within the meat withholding period for any veterinary medicine administered by you or a previous owner? If **No**, go to next question, if **Yes**, describe the treatment accurately below and contact your petfood operator for further advice. Yes No

Animal ID	Veterinary Medicine	Last Administered	Withholding Period

(Note: animals that are within the withholding period can be slaughtered but must be categorised as medium risk raw material).

- 1.2 Were these animals born on your property? Yes No

2 Farmed Mammal Special Procurement Conditions (see Note 4) Yes No

- 2.1 Are any of these animals under MPI movement controls for residues, for any purpose other than TB? Yes No
- 2.2 Are any of these animals subject to any residue suspect list? Yes No
- 2.3 Are any of these animals subject to any national disease surveillance suspect list? Yes No
- 2.4 Have any of these animals been imported live into New Zealand? Yes No
- 2.5 Are any cattle or deer supplied confirmed reactors to a TB test? Yes No
- 2.6 Are any cattle or deer supplied from a TB herd status Infected (I) farm? Yes No
- 2.7 Have any of the animal(s) supplied ever been fed meals containing ruminant protein? Yes No
- 2.8 Have any cattle, deer, lamb or goats supplied been vaccinated against Johne's disease? Yes No

3 Farmed Mammal Poison Use / Chemical Contaminants Yes No

- 3.1 Have you any reason to suspect that these animals may have been exposed to any poison within the time frames for that type of poison or to any other environmental chemical contaminant? If **Yes**, describe accurately: (see Note 5) Yes No

4 Farmed Mammal Health Status (see Note 6) Yes No

- 4.1 Are these animals alive and generally fit and healthy at the time of presentation to the primary processor? If **No**, then these animals are not suitable for primary processing for animal consumption. Yes No
- 4.2 Is the animal "down"? If **Yes**, identify the animal and describe the reason accurately: Yes No
- 4.3 Is the animal injured? If **Yes**, identify the animal and describe the injury accurately: Yes No

Declaration:

I understand that this declaration must be provided to, and will be retained by the primary processor.
 I understand that the primary processor may be required to provide a copy of this declaration to the Ministry for Primary Industries to meet their requirements under the Animal Products Act 1999.
 I declare that the information provided in this form is true and accurate. (see Note 7).

Supplier signature: _____ Date: _____

It is an offence under section 127 of the Animal Products Act 1999 to provide false or misleading information in this statement. Under the Privacy Act 1993 you have certain rights of access and correction of personal information held about you.

Notes:

1. Supplier Information

The supplier's details and property information must be accurately completed to enable full trace back of all consignments. Supplier means the owner or person in charge of the animals other than the person solely engaged in facilitating their transfer (such as a transport operator or purchasing agent). A saleyard operator may be a supplier.

2. Animal Identification

All animals must be individually identified to enable trace back of the animal(s) to the Supplier Statement. If not individually identifiable, unique ear tags must be fitted.

3. Farmed Mammal History

All veterinary medicines administered to the animal must be declared if the animal is still within the meat withholding period of those veterinary medicines. Animals that are slaughtered within the meat withholding period must be categorised as medium risk raw material. If you do not know the withholding period, or do not have information regarding any veterinary medicines administered on the animal, the following defaults apply:

- 91 days for farmed ruminants (e.g. cattle, deer, sheep, goats, alpacas or llamas); and
- 63 days for farmed monogastrics (e.g. pigs, horses, ostriches and emus).

4. Farmed Mammal Special Procurement Conditions

If you answered Yes to any questions (other than 2.8) you must make contact with your primary operator and confirm whether that operator is able to process your animal(s).

5. Farmed Mammal Poison Use / Chemical Contaminants

The supplier must notify any reasonable suspicions that the animal(s) represented by this Supplier Statement may have been exposed to any poison or environmental chemical contaminant. Suppliers must not present animals for primary processing that have been procured from any areas where:

- Brodifacoum, bromadiolone, difethialone, difenacoum or flocoumafen has been used until 3 years has elapsed after the cessation of the poisoning operation; or
- Sodium monofluoroacetate (1080) or coumatetralyl has been used until 4 months has elapsed after the cessation of the poisoning operation; or
- Diphacinone or pindone has been used until 2 months has elapsed after the cessation of the poisoning operation; or
- Para-aminopropiophenone, sodium nitrite or any other poison not listed above (except cholecalciferol or cyanide) has been used until 1 month has elapsed after the cessation of the poisoning operation.

6. Farmed Mammal Health Status

All animals must be alive and "generally fit and healthy" at the time of presentation to the primary operator. Animals that are "generally fit and healthy" but display the symptoms of some disease (e.g. cancer eye), may be found suitable as minimal risk raw material following examination by a trained petfood examiner.

"Generally fit and healthy" means, to a layperson who is familiar with the normal behaviour of the type of animal, that the animal shows signs of, or behaviour of, being bright and reasonably alert and does not display signs and behaviour that would suggest the animal is sick or dying. The petfood examiner is specifically trained to determine whether or not an animal is suitable for primary processing.

7. Declaration

This statement must be signed and dated.

All animals presented for primary processing must be accompanied by a correctly completed Supplier Declaration.

The supplier must retain a copy of this Statement for at least one year in case of regulatory audit.

8. Electronic Submission

This statement may be provided electronically, but only with the consent of the recipient.
